Le Quang Dung

SENIOR FRONT-END ENGINEER

9+ years building production web apps with the React ecosystem. Currently contributing to **VinClub**, a Loyalty app at VinSmart Future. Deep across Web2 and Web3 — from large enterprise dashboards and shared design systems, build dApps on EVM, Solana, Bitcoin, TON, and Sui. I architect component systems, publish NPM packages, and mentor front-end teams.

VinSmart Feature Vingroup

Senior Front-End Engineer

Core member rebuilding VinClub, a loyalty super-app for the Vietnamese market — four React SPAs sharing one editorial design system.

VinClub Loyalty Portal — Loyalty Admin CMS

Admin CMS for members, tiers, access-control, and business accounts.

- Owned front-end architecture end-to-end — bootstrapped the project and set up the Turborepo + pnpm monorepo hosting the app and its shared packages
- Led the build of the member, tier, and access-control experience, shaping the domain vocabularies the whole team builds on
- Established the app-wide foundations — i18n and SSO session auth — from day one

React 19

TypeScript

Vite

Tailwind CSS

shadcn/ui

@vinclub/ui — Shared Design System

Graphite — the editorial-monochrome design language behind every VinClub app.

- Core contributor to @vinclub/ui — the single source of truth powering all four VinClub apps
- Co-designed the OKLCH token system and built out the headless component layer behind the Graphite language
- Drove adoption across all four apps, making it the default way teams build UI

React 19

Tailwind v4

Radix

Turborepo

pnpm

Caliber Web3 Product Studio

Front-End Developer

dApps across EVM, Solana, Bitcoin, TON, and Sui.

Optimex — Bitcoin Finance Platform

Trust-minimized BTC finance platform for swap, lending, and yield strategies.

- Redesigned the UI on a new design system and implemented core dApp features: Swap, Lending, Yield
- Refactored architecture for maintainability; added Bitcoin wallet providers and Passkey authentication
- Built the Android APK (published to Solana dApp Store) and a wallet-less swap flow for external wallets
- Shipped an embeddable Swap Widget (MVP) and cross-chain Atomic Swap (MVP) for EVM ↔ BTC
- Designed an analytics dashboard for transaction and volume monitoring

React

Zustand

Ethers.js

Solana

Bitcoin

Tobi Copilot — MPC Digital Wallet

Multi-chain wallet powered by MPC threshold signatures (ECDSA / EdDSA).

- Integrated MPC with partners: keyshare generation, backup, and recovery
- Built the core wallet for EVM, Solana, TON, Tron, and Sui — address, build / sign / broadcast
- Integrated WalletConnect, Ton Connect, and Phantom Connect

React

Zustand

Ethers.js

Multi-chain

Friendscan — friend.tech Analytics

Analytics for keys, portfolios, holders, and trading activity on friend.tech.

- Built features and drove technical discussions and issue resolution

Next.js

Wagmi

RainbowKit

May 2020 – Jul
2023

Faucet — Internal Testnet Tool

Search and faucet testnet tokens across multiple chains.

- Developed new features and resolved issues across chains

Next.js

Aperia Solutions Vietnam Payments

Front-End Developer

Client360 Issuing — Fiserv

Credit-card management tool redesigning FD-EVOLVE and Solution Builder.

- Built and maintained features; trained and mentored 9 team members
- Built a dynamic form system packaged for reuse across projects
- Drove technical discussions and resolved project issues

React

Redux

DLS — UI Component Library

Internal React library on React-Kendo for a unified design system.

- Led architecture and built the component library from scratch
- Partnered with design to refine implementation; wrote usage docs
- Published the package to the internal NPM registry

React

React-Kendo

NPM

Jan 2020 – Apr
2020

Zalo VNG

Front-End Developer

Zalo Web — Messaging Platform

Vietnam's largest messaging platform.

- Optimized existing features for performance and stability
- Integrated Sentry error tracking into the Electron desktop app

React

Redux

Electron

MB Ageas Life — Employee Tracking

System to manage employees, campaigns, announcements, and insurance contract revenues.

- Owned front-end architecture and built core modules
- Worked directly with IT partners on technical decisions; wrote coding-standards & deployment docs

React

Redux

HDBank — Website Rebuild

Rebuilt the entire HDBank web system.

- Researched Next.js and trained 4 team members
- Led architecture and developed system modules; wrote coding / deployment docs

Next.js

Redux

VietJet Flight View — Operations

App to monitor, organize, and manage flights.

- Built core features and integrated partner APIs

React

Redux

Mar 2017 – May
2018

VeXeRe Transport

Front-End Developer

TMS Lite — Mobile Transport App

Mobile application for transport operations.

- Designed the project architecture
- Built modules and business flows from requirements

React Native

Redux

BMS Lite — Garage Management

Web app for garage ticketing, seat/route configuration, trip management, and sales.

- Developed modules and business flows from requirements
- Built reusable components shared across products

React

Redux

AMS — Customer Care

Internal system for customer support: ticket search, payment, and consultation flows.

- Maintained the system, built small features, and fixed bugs

AngularJS
